

Spring Cleaning

With Spring upon us it is time for sprucing up, organizing & checking things off the list that ensures our house is in order.

Not surprisingly, water should be on that list. Regular maintenance on your water treatment equipment can sustain the life of it, your appliances, and your pipes & fixtures significantly.

For home's on a well, it is recommended to test your water annually due to weather, runoff and natural changes in water that may affect your well water supply.

*Not all water is the same. Contaminants, usage, plumbing & regular maintenance all play a factor.

Use Good Quality Solar Salt. Other salt can get gummed up, causing poor regeneration, resulting in hard water.

Brine Tank Cleaning Every 2-3 Years. Minerals in your water can cause a sludge, or clumps to form, which results in poor regeneration. High levels of sediment or iron require a more frequent cleaning

Seal Pack & Piston Changes. The main driving mechanisms in control valves are exposed to raw water and typically need to be changed every 5-7 years.

Media Rebed. Resin becomes exhausted or fouled and has a much weaker capacity for doing its job. Replace your Softener media every 8-10 years & your Carbon Filter media every 3-4 years.

Filter Changes. Filters remove impurities and contaminants, such as sediments, chemicals, and minerals, which can accumulate over time and reduce the quality of the water.

Blow Down Retention Tank. When chlorine oxidizes iron, sulphur and/or bacteria it settles on the bottom of the tank and fluffs over throughout the rest of the system.

Genesee Valley Penny Saver

Established in 1948 our local Penny Saver has been delivering the highest quality and value publication to connect their loyal advertisers with their faithful readers. Their weekly publications include local news, events, games, classifieds & more. Their local editions reach the Monroe, Livingston, Genesee, Ontario, Orleans, Steuben and Wayne Counties.

Beyond their publication they also provide advertising, direct mail and printing services and promotional products.

Contact them for delivery, read online at gvpennysaver.com or sign up to have it delivered right to your email!

Water Solutions

Water Softening

Remove minerals in the water giving you cleaner, softer water.

Water Filtration

Address common well & municipal water problems like iron, sediment, sulfur, chlorine & more.

Water Sanitization

Keep your water clean from biologically unsafe contaminants.

Reverse Osmosis

Target a broad range of contaminants & enjoy a virtually unlimited water supply from your tap.

Bottled Water

Ultra-filtered bottled water delivered right to your door.

Bottleless Coolers

Clean, filtered water hooked up to your office sink.
